# ENGINE FLUSH

Envirotek® would like to see your new engine oil stay golden for as long as possible between changes. For this you need to start with a clean engine!

Even the best of oils break down with time. Once dirty oil is saturated with impurities it will turn into sludge.

With today's extended service intervals combined with severe driving conditions, contamination free engines are essential for safe hassle free motoring.

Oil Pan Before

Oil Pan After

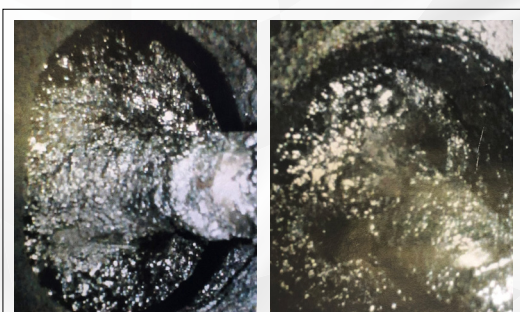

Sludge will negatively affect the power of your engine, cause excessive wear and tear on all moving parts, increase the running cost of your car and contribute to polluting exhaust emissions.

A normal oil change without a flush will only get rid of the sludge your oil is currently carrying. This is the reason we recommend and use engine flush on all services. Therefore, the new oil doesn't have to start cleaning the mess left behind from the previous oil.

## Envirotek® Engine Flush will:

- Removes sludge & soft carbon built-up from engine
- Clean & Free noisy hydraulic lifters
- Raise & stabilise compression by removing carbon
- Keep new oil cleaner, for longer
- Lubricate & protect while cleaning
- Improve engine efficiency providing more power

# PETROL POWER BOOST

Before

After

Envirotek® Petrol Power Boost is a foaming aerosol upper cylinder cleaner that restores power to the engine by removing contaminants from the intake system through to the combustion chamber. Petrol Power Boost will help improve idle and fuel consumption, giving long term benefits to the vehicle. A clean engine is an efficient engine.

## Envirotek® Petrol Power Boost will:

- Restore compression and improves performance
- Improve engine idle
- Improve fuel consumption
- Cut harmful emissions

# OIL BOOSTER

Envirotek® Oil Booster is a polymer based product, designed to reduce hard oil formation and neutralise harmful crankcase acids. It is designed to combat engine wear and ensure maximum lubrication at all time.

The Oil Booster is highly recommended for both Petrol and Diesel engines as it helps to keep more of the harmful contamination in suspension with the oil throughout the long extended service periods.

It is a product blended to protect the engine during severe driving conditions like frequent cold starting, short distance trips and stop and go in city traffic as per conditions listed in the manufacturers handbook. This product is also excellent for breaking in a new motor. It exceeds specifications required by all the leading manufactures.

## **Envirotek® Oil Booster will:**

- Reduce oil burning and wear
- Reduce corrosion
- Maintain oil pressure
- Neutralise crankcase acids
- Prevent 'cold start' rattle
- Protect engines during severe driving conditions

# FUEL SYSTEM CLEANER

Envirotek® Fuel System Cleaner is the cleaning product the professionals recommend for both preventative maintenance and problem solving on petrol vehicles.

Modern engines are smaller, work harder putting out more power while operating at very high temperatures. Together with severe driving conditions and variable quality of blended fuels, it can affect the power and operation of your engine.

Deposits on inlet-valves and injectors will have adverse effects on performance, fuel economy and the driveability of your car. A Fuel System De-Carb or an Injector Cleaning Service will instantly restore power and economy to your vehicle at minimal expense.

This powerful product can be used in three different ways. As an in-tank additive, intake valve and upper cylinder cleaner or as a direct on-car injector cleaner.

## DIESEL POWER BOOST

### Diesel Upper Cylinder Cleaner

Envirotek® Diesel Power Boost is a diesel soot cleaner that can be used at different points of application to clean and renew an intake manifold or DPF.

Applying Diesel Power Boost to the intake system can clean from turbocharger through to the EGR system. It's formulated to dissolve carbon soot deposit in the manifold, on intake valves and through the EGR system.

Running Diesel Power Boost pre-turbo can clean oil deposits in both turbo and intercooler caused by the engine breather.

In most cases using Diesel Power Boost can save both the mechanic and customer time and money.

### DPF Cleaner

Envirotek® Diesel Power Boost can also be applied pre-DPF to reduce soot accumulation. If the DPF's soot level is at a point where it is outside the parameters to perform its own regeneration, Diesel Power Boost can reduce it to a point where a forced regeneration can occur.

### Envirotek® Diesel Power Boost will:

- Smoother idle and acceleration
- Restores lost power
- Improves fuel consumption
- Cuts harmful emissions
- Diesel Power Boost is non-flammable

## DIESEL CONDITIONER

Envirotek® Diesel Conditioner is a new generation diesel fuel conditioner made for all diesel systems, including high pressure common rail systems. The product is designed to be used in multiple ways as either an in-tank additive, concentrated filter primer or as a direct injector cleaner.

Furthermore, the Diesel Conditioner contains a powerful biocide treating the entire diesel systems for diesel "bug".

### Envirotek® Diesel Conditioner will:

- Clean injectors, nozzles, compression rings and valve seats
- Control smoke emissions
- Remove gum and varnish
- Improve fuel stability
- Biocide treatment

# TRANSMISSION KIT

Envirotek® Transmission Flush contains an additive package specifically developed to remove sludge and varnish contamination from the valve body, the filter screen and many other critical components of the transmission. Special lubricants are added to protect the transmission during the flushing process.

Most people are unaware that your automatic transmission contains more moving parts than any other system in a vehicle. After a period of time automatic transmission fluid breaks down, this can be exacerbated under different driving conditions. Dirty oil deposits left behind can form around all of those moving parts. Slowly and without notice, those moving parts begin sticking and gum up, causing the clutches to slip or chatter and making shifting difficult.

Envirotek® Transmission Conditioner is specifically blended to help keep the seals soft, to prevent and stop transmission leaks. Envirotek® Transmission Conditioner also contains a power anti-shudder additive to restore a smoother shift.

This product is not suitable for CVT or DSG gearboxes.

## **Envirotek® Transmission Kit will:**

- Extend life of transmission
- Essential for vehicles towing or under extreme driving conditions
- Will help with smoother shifting
- Will improve fuel economy

*Automatic transmission machine for complete fluid change of transmission and torque converter (see Accessories).*

# POWER STEERING KIT

Envirotek® Power Steering Flush is formulated with a special cleaning lubricating agent to remove gum and varnish from the power steering system.

This product will combat all contaminated fluids that will result in premature wear in the power steering pump and steering rack which may lead to excessive noise from the pump and lead to erratic steering.

Envirotek® Power Steering Conditioner is a synthetic blend designed to protect all steering components. This product is designed to reduce pump and rack wear, it will reduce pump noise and keep all components clean.

## **Envirotek® Power Steering Kit will:**

- Dissolve, loosen and remove sludge, varnish, dirt and oxidation deposits
- Reduce noise, friction, wear, chatter and oxidation
- Will lubricate and condition all seals and hoses

# ENVIRO-AIR

Envirotek® Enviro-Air and Airco Bomb is like hand sanitiser for the vents and interior surfaces of your car.

Micro-organisms, such as mould and bacteria, are a real problem. The “hot and cold” conditions inside the air-conditioning system is creating a moist environment which is the perfect conditions for mould and bacteria to grow inside the ventilation system. This is linked to many health issues like sinus congestion, allergic reactions, frequent headaches and fatigue.

This specialised product is designed to eliminate Mould & Bacteria thereby eliminating unpleasant odours, leaving behind a hint of pleasant fresh scent.

## Envirotek® Airco Bomb will:

- Eliminate unpleasant odours
- Eliminate Mould & Bacteria
- Prevent Allergic Reactions
- Leave a pleasant, fresh scent

## ACCESSORIES

**Automatic Transmission Machine (ATM)**  
for complete fluid change of transmission and torque converter

**Canister for**

- On-Car Petrol Injector Cleaning
- On-Car Diesel Cleaning
- Diesel Upper Cylinder Cleaning
- Petrol Upper Cylinder Cleaning
- DPF Cleaning

**Envirotek Product Brochure (A4)**

**Workshop Signage**

- Corflute 535x325mm
- ACM panel 900x600mm

**Engine Flush Standing Table Display**

## Who is Envirotek?

Let's start with the motto - Australian Made and Made For The Trade. We are a specialised automotive additive company with more than 20 years of experience in manufacturing and distributing in Australia.

The roots of the business were laid in Germany however we are now a 100% Australian owned company offering products for workshops and dealerships across the country.

With blending, packaging and warehousing in Brisbane, we continue to support local families and the Australian economy.

As for the second half on the motto - Made For The Trade - Envirotek has solely been a trade only product from the day of establishment. We are not in the business of selling to the retail market (i.e. your customers). You share that exclusivity with this Australian made product as part of your automotive business.

Last but not least, the Envirotek logo represents our commitment to combining technology and the environment and to stay ahead of the rapid growing changes we see in our industry.

# **PROTECTING** OUR ENVIRONMENT

With growing concerns of emissions in today's society we are more focused than ever in making sure our customers vehicles are running at their best. Regular servicing and use of Envirotek products will benefit workshops and their customers in saving both time and money as well as substantially helping the environment by keeping exhaust emissions clean.

Whether or not the traditional combustion engine is polluter number one is really for the experts to argue about. The fact is, we must all do what we can to protect our environment by keeping our vehicles regularly serviced.

Severe driving conditions such as frequent cold starting, short distance trips, stop and go in city traffic etc all contributes to harmful impurities building up on the internal parts of the motor. The results are loss of power, increased fuel and oil consumption, lack of lubrications, damaging and pollution exhaust emissions and last but not least, engine damage!

Envirotek products are specifically developed to maintain, clean and help restore the engine which benefits both your vehicle and our environment.

## ***The Benefits of Using Envirotek® are:***

- Better oil and fuel consumption
- Cleaner and more powerful combustion
- Improved engine performance
- Less wear on all moving parts
- Considerable carbon reduction
- Clean exhaust emissions
